Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) Simone Santini

The explosion of computer use and internet communication has placed new emphasis on the ability to store, retrieve and search for all types of images, both still photo and video images. The success and the future of visual information retrieval depends on the cutting edge research and applications explored in this book. It combines the expertise from both computer vision and database research.

Unlike text retrieval and text/numeric databases the challenges of image databases are enormous. How do you use "data mining" to search for an image if you do not have "key words" to search? **Exploratory Image Databases** introduces the idea that it is possible to solve this problem by merging database systems into a single search and browse activity called "exploration."

Exploratory Image Databases is one of the first single-author books that unifies the critical emerging topic of image databases. A new approach to image databases, the work is divided into four central parts: introduction to the problems that image database research must solve; computer vision and information retrieval techniques; image database issues; and interface and engines for visual searches.

Example: Imagine the difficulty of building and using a database for "face recognition," where an image of a face is used. In order to effectively use the image a huge number of characteristics would need to be entered in the database. The goal of future image databases is to use hardware and software to recognize and categorize images without typing in characteristics.

- * Comprehensive coverage of the image analysis as well as the database/theoretical aspects of image databases.
- * Extensive coverage of interfaces and interaction models, with a theoretical framework for the development of new interaction schemes.
- * Identifies three interaction models between users and image databases, two of which have no counterpart in traditional databases.
- * Coverage of the relation between image and text, including mixed search models and the automatic determination of the relation between images and text on large corpuses like the web.
- * Analysis of the process of signification in images and its influence on the interaction models and technological problems of image databases.

From reader reviews:

Bryan Rodriguez:

This Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) book is not really ordinary book, you have it then the world is in your hands. The benefit you will get by reading this book will be information inside this book incredible fresh, you will get data which is getting deeper a person read a lot of information you will get. This particular Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) without we comprehend teach the one who looking at it become critical in imagining and analyzing. Don't end up being worry Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) can bring if you are and not make your case space or bookshelves' turn into full because you can have it inside your lovely laptop even cellphone. This Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) having great arrangement in word in addition to layout, so you will not truly feel uninterested in reading.

Elsie Fiala:

Do you certainly one of people who can't read gratifying if the sentence chained inside the straightway, hold on guys this particular aren't like that. This Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) book is readable by simply you who hate the perfect word style. You will find the info here are arrange for enjoyable examining experience without leaving actually decrease the knowledge that want to supply to you. The writer involving Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) content conveys the idea easily to understand by a lot of people. The printed and e-book are not different in the content material but it just different such as it. So , do you even now thinking Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) is not loveable to be your top record reading book?

Margaretta Lee:

Information is provisions for those to get better life, information nowadays can get by anyone from everywhere. The information can be a information or any news even a problem. What people must be consider whenever those information which is inside former life are hard to be find than now could be taking seriously which one is suitable to believe or which one the particular resource are convinced. If you get the unstable resource then you obtain it as your main information we will see huge disadvantage for you. All those possibilities will not happen with you if you take Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) as your daily resource information.

Dennis Mock:

Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) can be one of your starter books that are good idea. All of us recommend that straight away because this guide

has good vocabulary that will increase your knowledge in vocabulary, easy to understand, bit entertaining however delivering the information. The copy writer giving his/her effort to set every word into enjoyment arrangement in writing Exploratory Image Databases: Content-Based Retrieval (Communications, Networking and Multimedia) although doesn't forget the main stage, giving the reader the hottest and based confirm resource info that maybe you can be certainly one of it. This great information can draw you into fresh stage of crucial considering.
