The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine Kevin Davies

In 2000, President Bill Clinton signaled the completion of the Human Genome Project at a cost in excess of \$2 billion. A decade later, the price for any of us to order our own personal genome sequence—a comprehensive map of the 3 billion letters in our DNA—is rapidly and inevitably dropping to just \$1,000. Dozens of men and women—scientists, entrepreneurs, celebrities, and patients—have already been sequenced, pioneers in a bold new era of personalized genomic medicine. The \$1,000 genome has long been considered the tipping point that would open the floodgates to this revolution.

Do you have gene variants associated with Alzheimer's or diabetes, heart disease or cancer? Which drugs should you consider taking for various diseases, and at what dosage? In the years to come, doctors will likely be able to tackle all of these questions—and many more—by using a computer in their offices to call up your unique genome sequence, which will become as much a part of your medical record as your blood pressure. Indeed, many experts are advocating that all newborns have a complete genome analysis done so that preventive measures and preemptive medicine can begin early in life.

How has this astonishing achievement been accomplished? And what will it mean for our lives? To research the story of this unfolding revolution, critically acclaimed science writer Kevin Davies has spent the past few years traveling to the leading centers and interviewing the entrepreneurs and pioneers in the race to achieve the \$1,000 genome. He vividly brings to life the extraordinary drama of this grand scientific achievement, revealing the masterful ingenuity that has transformed the process of decoding DNA and delivering the information it possesses to the public at large.

Davies also profiles the future of genomic medicine and thoughtfully explores the many pressing issues raised by the tidal wave of personal genetic information. Will your privacy be protected? Will you be pressured, by insurance companies or by your employer, to get your genome sequenced? What psychological toll might there be to discovering you are at risk for certain diseases like Alzheimer's? And will the government or the medical establishment come between you and your genome?

One thing that is not in question is that we are moving swiftly into the personalized medicine era, and *The \$1,000 Genome* is an essential guide to this brave new future.

From reader reviews:

Christopher Price:

Do you have favorite book? In case you have, what is your favorite's book? E-book is very important thing for us to know everything in the world. Each guide has different aim or maybe goal; it means that reserve has different type. Some people truly feel enjoy to spend their a chance to read a book. These are reading whatever they take because their hobby is usually reading a book. Think about the person who don't like reading through a book? Sometime, individual feel need book once they found difficult problem or even exercise. Well, probably you will require this The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine.

Tracy Zapata:

Inside other case, little men and women like to read book The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine. You can choose the best book if you want reading a book. Providing we know about how is important the book The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine. You can add expertise and of course you can around the world by just a book. Absolutely right, since from book you can learn everything! From your country until eventually foreign or abroad you will find yourself known. About simple matter until wonderful thing you may know that. In this era, we are able to open a book or even searching by internet unit. It is called e-book. You can utilize it when you feel uninterested to go to the library. Let's examine.

Rene Moore:

Now a day people that Living in the era everywhere everything reachable by talk with the internet and the resources within it can be true or not need people to be aware of each data they get. How individuals to be smart in receiving any information nowadays? Of course the reply is reading a book. Reading a book can help persons out of this uncertainty Information particularly this The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine book as this book offers you rich details and knowledge. Of course the knowledge in this book hundred per-cent guarantees there is no doubt in it everybody knows.

Jack Morgan:

Do you have something that you enjoy such as book? The publication lovers usually prefer to opt for book like comic, limited story and the biggest you are novel. Now, why not seeking The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine that give your pleasure preference will be satisfied through reading this book. Reading practice all over the world can be said as the way for people to know world a great deal better then how they react when it comes to the world. It can't be stated constantly that reading habit only for the geeky man or woman but for all of you who wants to be success person. So , for all of you who want to start examining as your good habit, you are able to pick The

\$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine become your own personal starter.
