Drug-Biomembrane Interaction Studies: The Application of Calorimetric Techniques (Woodhead Publishing Series in Biomedicine)

Drug-Biomembrane Interaction Studies: The Application of Calorimetric Techniques (Woodhead Publishing Series in Biomedicine)

The design and development of drugs and new pharmaceutical formulations require a full characterization of the chemical and physicochemical events occurring at the level of the single active ingredients or excipients, as well as their reciprocal interaction. Thermal analysis techniques are among the most widely used methods to achieve this; among them, the Differential Scanning Calorimetry (DSC) technique, in which the thermotropic behaviour of a single substance or mixtures is analyzed as a function of a controlled temperature program. DSC is an accurate and rapid thermo-analytical technique, widely used by the pharmaceutical industry and in drug research to investigate several physico-chemical phenomena, such as polymorphism, melting and crystallization, purity, and drug-excipient interaction; as well as characterizing biomolecules such as genetic material.

Drug-biomembrane interaction studies is written by scientists renowned for their work in the field of DSC applications to drug development and delivery, and especially to drug-biomembrane interaction studies. The book combines insights from biochemistry and physiology with those from structural biology, nanotechnology and biothermodynamics, to obtain a complete depiction of cell membranes and their functions.

- Summarizes and updates the recent development in a unique handbook format
- Consists of a combination of scientific updates within the field
- Contains chapters written by some of the highest-level experts in the field of DSC

From reader reviews:

John Bullen:

What do you with regards to book? It is not important to you? Or just adding material if you want something to explain what you problem? How about your free time? Or are you busy man? If you don't have spare time to try and do others business, it is make one feel bored faster. And you have time? What did you do? Every person has many questions above. They should answer that question simply because just their can do that. It said that about reserve. Book is familiar in each person. Yes, it is appropriate. Because start from on kindergarten until university need this kind of Drug-Biomembrane Interaction Studies: The Application of Calorimetric Techniques (Woodhead Publishing Series in Biomedicine) to read.

Frances Small:

The actual book Drug-Biomembrane Interaction Studies: The Application of Calorimetric Techniques (Woodhead Publishing Series in Biomedicine) has a lot of knowledge on it. So when you check out this book you can get a lot of gain. The book was written by the very famous author. Mcdougal makes some research ahead of write this book. This kind of book very easy to read you may get the point easily after scanning this book.

Leonard White:

A lot of e-book has printed but it takes a different approach. You can get it by net on social media. You can choose the most beneficial book for you, science, comedian, novel, or whatever by searching from it. It is identified as of book Drug-Biomembrane Interaction Studies: The Application of Calorimetric Techniques (Woodhead Publishing Series in Biomedicine). You can contribute your knowledge by it. Without departing the printed book, it could possibly add your knowledge and make a person happier to read. It is most crucial that, you must aware about guide. It can bring you from one destination to other place.

Katrina Hering:

What is your hobby? Have you heard in which question when you got students? We believe that that query was given by teacher to their students. Many kinds of hobby, Every individual has different hobby. So you know that little person like reading or as reading through become their hobby. You must know that reading is very important and book as to be the factor. Book is important thing to include you knowledge, except your teacher or lecturer. You find good news or update regarding something by book. A substantial number of sorts of books that can you choose to use be your object. One of them is Drug-Biomembrane Interaction Studies: The Application of Calorimetric Techniques (Woodhead Publishing Series in Biomedicine).
