*Keith Richards*

## **Rivers: Form and Process of Alluvial Channels** Keith Richards

First published in 1982, this remains a seminal work in geomorphology, a classic text. The reviews speak for themselves: "Rivers is undoubtedly one of the major contributions to the subject of fluvial geomorphology in the last decade. Keith Richards provides a detailed review of "the state of the art" in a field which has grown so much in recent years, that, on this basis alone, the book is a major achievement. It is an essential reference text for serious students and practitioners in geomorphology, sedimentology and river engineering."

Sedimentology "In this book Keith Richards has assembled a wealth of information on the geomorphology of rivers.. (He) is to be congratulated on producing a thoroughly researched, up-to-date account of fluvial processes and landforms. This book will be a standard text for many years to come." Geography "This lucid and scholarly review will undoubtedly serve as an excellent advanced text for geomorphology courses and as a standard reference work for students in allied subjects." The Times Higher Education Supplement Keith Richards is Professor of Geography at the University of Cambridge, where he is also a Fellow of Emmanuel College. He has been a member of the Department (University Lecturer, Reader, then Professor) since 1984, and before that was at the University of Hull. He originally graduated from Cambridge, both at Bachelor and PhD levels. During his career he has published in several areas of geomorphology, but his main research focus has been in fluvial geomorphology. He has been Secretary and Chairman of the British Geomorphological Research Group, and an editor of *Earth Surface Processes and Landforms*. He has written or edited nine books and about 150 papers. His research interests have also included glacial hydrology, catchment and hillslope processes, and innovation in modelling and monitoring approaches in geomorphology and hydrology (such as terrestrial photogrammetry, MRI, computational fluid dynamics, and discrete element methods). He has also worked on the interaction of fluvial, hydrological and ecological processes in floodplain environments, including the roles of channel migration dynamics as a control of floodplain biodiversity, the roughness effects of woody riparian vegetation, and hydrological influences on floodplain ecology. His interests also range from the more philosophical aspects of field-based environmental research, to the application of research to practical problems (in, for example, Honduras, Ethiopia, Saudi Arabia, Nepal, Thailand, as well as in the UK and Europe).

### **From reader reviews:**

#### **Mary Deemer:**

In this 21st century, people become competitive in every way. By being competitive today, people have to do something to make all of them survive, being in the middle of often the crowded place and notice by surrounding. One thing that sometimes many people have underestimated the idea for a while is reading. Yep, by reading a reserve your ability to survive raise then having chance to endure than other is high. For you personally who want to start reading the book, we give you this kind of Rivers: Form and Process of Alluvial Channels book as basic and daily reading e-book. Why, because this book is more than just a book.

#### **William Prentice:**

Beside this particular Rivers: Form and Process of Alluvial Channels in your phone, it might give you a way to get nearer to the new knowledge or details. The information and the knowledge you might get here is fresh through the oven so don't possibly be worry if you feel like an aged people live in narrow community. It is good thing to have Rivers: Form and Process of Alluvial Channels because this book offers to you personally readable information. Do you oftentimes have book but you seldom get what it's about. Oh come on, that won't happen if you have this in the hand. The Enjoyable option here cannot be questionable, just like treasuring beautiful island. Use you still want to miss the idea? Find this book and read it from currently!

#### **Gerald Kelly:**

As we know that book is significant thing to add our know-how for everything. By a e-book we can know everything we want. A book is a range of written, printed, illustrated as well as blank sheet. Every year seemed to be exactly added. This e-book Rivers: Form and Process of Alluvial Channels was filled about science. Spend your spare time to add your knowledge about your scientific research competence. Some people has distinct feel when they reading a book. If you know how big advantage of a book, you can experience enjoy to read a book. In the modern era like right now, many ways to get book that you just wanted.

#### **Marcella Cook:**

What is your hobby? Have you heard which question when you got pupils? We believe that that concern was given by teacher to their students. Many kinds of hobby, Everybody has different hobby. And you also know that little person like reading or as reading through become their hobby. You need to know that reading is very important along with book as to be the factor. Book is important thing to include you knowledge, except your own personal teacher or lecturer. You will find good news or update about something by book. Numerous books that can you take to be your object. One of them is niagra Rivers: Form and Process of Alluvial Channels.
