Modeling Methods for Marine Science

David M. Glover, William J. Jenkins, Scott C. Doney

Modeling Methods for Marine Science David M. Glover, William J. Jenkins, Scott C. Doney

This advanced textbook on modeling, data analysis and numerical techniques for marine science has been developed from a course taught by the authors for many years at the Woods Hole Oceanographic Institute. The first part covers statistics: singular value decomposition, error propagation, least squares regression, principal component analysis, time series analysis and objective interpolation. The second part deals with modeling techniques: finite differences, stability analysis and optimization. The third part describes case studies of actual ocean models of ever increasing dimensionality and complexity, starting with zero-dimensional models and finishing with three-dimensional general circulation models. Throughout the book hands-on computational examples are introduced using the MATLAB programming language and the principles of scientific visualization are emphasised. Ideal as a textbook for advanced students of oceanography on courses in data analysis and numerical modeling, the book is also an invaluable resource for a broad range of scientists undertaking modeling in chemical, biological, geological and physical oceanography.

From reader reviews:

Dominic Loflin:

Now a day people that Living in the era wherever everything reachable by connect to the internet and the resources within it can be true or not involve people to be aware of each information they get. How many people to be smart in receiving any information nowadays? Of course the reply is reading a book. Studying a book can help folks out of this uncertainty Information specially this Modeling Methods for Marine Science book because this book offers you rich details and knowledge. Of course the information in this book hundred % guarantees there is no doubt in it you may already know.

Grady Meraz:

People live in this new morning of lifestyle always make an effort to and must have the time or they will get great deal of stress from both daily life and work. So , if we ask do people have spare time, we will say absolutely without a doubt. People is human not a robot. Then we request again, what kind of activity do you possess when the spare time coming to anyone of course your answer will certainly unlimited right. Then ever try this one, reading guides. It can be your alternative in spending your spare time, typically the book you have read is actually Modeling Methods for Marine Science.

Andrew Thompson:

What is your hobby? Have you heard this question when you got students? We believe that that question was given by teacher to their students. Many kinds of hobby, Everybody has different hobby. And you also know that little person just like reading or as looking at become their hobby. You need to know that reading is very important and also book as to be the thing. Book is important thing to include you knowledge, except your own teacher or lecturer. You get good news or update concerning something by book. Numerous books that can you decide to try be your object. One of them is this Modeling Methods for Marine Science.

Curtis Graham:

Reading a book make you to get more knowledge from it. You can take knowledge and information from your book. Book is published or printed or outlined from each source that filled update of news. In this modern era like now, many ways to get information are available for an individual. From media social including newspaper, magazines, science book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just looking for the Modeling Methods for Marine Science when you needed it?
