Simulation of Complex Systems in GIS

Patrice Langlois

Simulation of Complex Systems in GIS Patrice Langlois

This book provides a comprehensive view of geographical modeling. It first establishes the foundations of geographical modeling, covering such concepts as structure, organization, system, topologies, as well as the concept of time. Next, it tackles the use of computer tools for dynamic model building and presents several models applied to various themes, such as urban growth, natural risks, as well as political themes. Finally, a general model of the geographic agents system (GAS), which can be used as a basis for the construction of a model-building platform for dynamic spatial models is presented.
