Comparative Climatology of Terrestrial Planets (Space Science Series)

Comparative Climatology of Terrestrial Planets (Space Science Series)

The early development of life, a fundamental question for humankind, requires the presence of a suitable planetary climate. Our understanding of how habitable planets come to be begins with the worlds closest to home. Venus, Earth, and Mars differ only modestly in their mass and distance from the Sun, yet their current climates could scarcely be more divergent. Only Earth has abundant liquid water, Venus has a runaway greenhouse, and evidence for life-supporting conditions on Mars points to a bygone era. In addition, an Earth-like hydrologic cycle has been revealed in a surprising place: Saturn's cloud-covered satellite Titan has liquid hydrocarbon rain, lakes, and river networks.

Deducing the initial conditions for these diverse worlds and unraveling how and why they diverged to their current climates is a challenge at the forefront of planetary science. Through the contributions of more than sixty leading experts in the field, *Comparative Climatology of Terrestrial Planets* sets forth the foundations for this emerging new science and brings the reader to the forefront of our current understanding of atmospheric formation and climate evolution. Particular emphasis is given to surface-atmosphere interactions, evolving stellar flux, mantle processes, photochemistry, and interactions with the interplanetary environment, all of which influence the climatology of terrestrial planets. From this cornerstone, both current professionals and most especially new students are brought to the threshold, enabling the next generation of new advances in our own solar system and beyond.

Contents

Part I: Foundations

Jim Hansen

Mark Bullock

Scot Rafkin

Caitlin Griffith

Shawn Domagal-Goldman and Antigona Segura

Kevin Zahnle

Part II: The Greenhouse Effect and Atmospheric Dynamics

Curt Covey

G. Schubert and J. Mitchell

Tim Dowling

Francois Forget and Sebastien Lebonnois

Vladimir Krasnopolsky

Adam Showman

Part III: Clouds, Hazes, and Precipitation

Larry Esposito

A. Määttänen, K. Pérot, F. Montmessin, and A. Hauchecorne

Nilton Renno

Zibi Turtle

Mark Marley

Part IV: Surface-Atmosphere Interactions

Colin Goldblatt

Teresa Segura et al.

John Grotzinger

Adrian Lenardic

D. A. Brain, F. Leblanc, J. G. Luhmann, T. E. Moore, and F. Tian

Part V: Solar Influences on Planetary Climate

Aaron Zent

Jerry Harder

F. Tian, E. Chassefiere, F. Leblanc, and D. Brain

David Des Marais

From reader reviews:

Wesley McFarland:

In other case, little folks like to read book Comparative Climatology of Terrestrial Planets (Space Science Series). You can choose the best book if you like reading a book. So long as we know about how is important any book Comparative Climatology of Terrestrial Planets (Space Science Series). You can add expertise and of course you can around the world by just a book. Absolutely right, mainly because from book you can learn everything! From your country until eventually foreign or abroad you will end up known. About simple thing until wonderful thing you could know that. In this era, we could open a book as well as searching by internet system. It is called e-book. You can utilize it when you feel bored to go to the library. Let's learn.

Markus Walker:

Do you one of people who can't read pleasurable if the sentence chained from the straightway, hold on guys this aren't like that. This Comparative Climatology of Terrestrial Planets (Space Science Series) book is readable by means of you who hate those straight word style. You will find the information here are arrange for enjoyable reading through experience without leaving possibly decrease the knowledge that want to offer to you. The writer of Comparative Climatology of Terrestrial Planets (Space Science Series) content conveys the idea easily to understand by many individuals. The printed and e-book are not different in the written content but it just different such as it. So , do you continue to thinking Comparative Climatology of Terrestrial Planets (Space Science Series) is not loveable to be your top checklist reading book?

Thelma Brady:

The e-book untitled Comparative Climatology of Terrestrial Planets (Space Science Series) is the book that recommended to you to see. You can see the quality of the publication content that will be shown to a person. The language that writer use to explained their way of doing something is easily to understand. The writer was did a lot of investigation when write the book, to ensure the information that they share to you is absolutely accurate. You also might get the e-book of Comparative Climatology of Terrestrial Planets (Space Science Series) from the publisher to make you a lot more enjoy free time.

Olga Snider:

The reason? Because this Comparative Climatology of Terrestrial Planets (Space Science Series) is an unordinary book that the inside of the e-book waiting for you to snap the idea but latter it will shock you with the secret the item inside. Reading this book close to it was fantastic author who also write the book in such amazing way makes the content inside of easier to understand, entertaining method but still convey the meaning completely. So , it is good for you because of not hesitating having this any more or you going to regret it. This excellent book will give you a lot of gains than the other book have got such as help improving your skill and your critical thinking method. So , still want to postpone having that book? If I ended up you I

will go to the book store hurriedly.
