Georges Cuvier

Recherches sur les ossemens fossiles des quadrupèdes 4 Volume Set (Cambridge Library Collection - Earth Science) Georges Cuvier

Georges Cuvier (1769-1832), one of the founding figures of vertebrate palaeontology, pursued a successful scientific career despite the political upheavals in France during his lifetime. In the 1790s, Cuvier's work on fossil mammoths enabled him to recognise that these were a different species from modern elephants, and that extinction was a scientific fact. He went on to show that many other large mammals had also become extinct. This four-volume work, originally published in 1812, is a collection of Cuvier's geological and osteological papers, focusing on fossil mammals including mastodon, rhinoceros, hippopotamus, ruminants, horses and pigs, and related living species. The introductory essay considers human origins and the formation of the earth, and appeared in English translation in 1813 (also available). Cuvier went on to publish his famous *Le règne animal*, available in the Cambridge Library Collection both in French (1817) and in Edward Griffith's expanded English translation (1827-35).

Elaine Harvey:

As a university student exactly feel bored to reading. If their teacher questioned them to go to the library as well as to make summary for some guide, they are complained. Just small students that has reading's heart or real their passion. They just do what the teacher want, like asked to go to the library. They go to presently there but nothing reading very seriously. Any students feel that reading is not important, boring and also can't see colorful pics on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this period of time, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this Recherches sur les ossemens fossiles des quadrupèdes 4

Volume Set (Cambridge Library Collection - Earth Science) can make you really feel more interested to read.
